

Marko Misovski

SOFTWARE ENGINEERING STUDENT

Profile

Fourth-year Software Engineering student at the University of Belgrade with a strong academic record and hands-on experience in systems programming, backend development, databases, and virtualization. Proficient in C/C++, Java, Python, and SQL, with experience developing operating systems, hypervisors, distributed applications, and AI-based solutions. 2nd-place winner of the Rivian AutoVision Hackathon.

Experience

Undergraduate Teaching Assistant, University of Belgrade, School of Electrical Engineering

Assisted students during database laboratory exercises and provided guidance on SQL and database concepts. Helped students troubleshoot and debug database assignments during practical exercises.

Education

B.Sc. in Software Engineering, School of Electrical Engineering, University of Belgrade

Current GPA: 8.97 | 2023-2027 (Expected)

Core Courses: Operating Systems, Concurrent & Distributed Programming, Data Structures & Algorithms, Object-Oriented Programming, Databases, Computer Architecture, Computer Networks, Probability & Statistics.

Mathematical Grammar School, Belgrade

High School Diploma | 2019-2023

Projects

KVM Hypervisor (C, Linux, KVM)

Developed a lightweight hypervisor using the Linux KVM API, implementing VM creation, vCPU management, guest memory, interrupts, and VM execution.

Multithreaded RISC-V Kernel (C++, Assembly)

Developed a multithreaded RISC-V kernel with preemptive scheduling, thread management, semaphores, and custom memory allocation.

Rivian AutoVision Hackathon, Pothole Detection System. (Python, YOLO, Roboflow)

Built an AI-based pothole detection system using YOLO and Roboflow, contributing to model training, backend development, and database integration. **2nd-place winner.**

Command Line Interpreter. (C++)

Developed a command-line interpreter supporting piping, redirection, batch processing, and system-level operations.
