

Marko Misovski

SOFTWARE ENGINEERING STUDENT | BACKEND / FULL-STACK

Belgrade, Serbia | +381 61 2855122 | markomisa123@gmail.com | github.com/markomisa

PROFILE

Fourth-year Software Engineering student at the University of Belgrade (GPA 9.04/10) with hands-on experience building Python backend services and Spotify API integrations, alongside systems programming projects. Strong foundation in REST APIs, databases, authentication, and containerized services.

EDUCATION

University of Belgrade, School of Electrical Engineering | Belgrade, Serbia
B.Sc. in Software Engineering, expected 2027 | GPA: **9.04/10**

Relevant coursework: Data Structures & Algorithms, Databases, Operating Systems, Concurrent Programming.

Mathematical Grammar School | Belgrade, Serbia | 2019-2023

EXPERIENCE

Undergraduate Teaching Assistant | University of Belgrade, School of Electrical Engineering | 2025-2026

- Explained SQL queries and database concepts during lab sessions; helped students troubleshoot and debug database assignments.

SELECTED PROJECTS

IEP Backend System | Python, Flask, JWT, MySQL, MongoDB, Redis, Docker, Kubernetes, Solidity

- Built backend services and role-protected REST APIs for authentication, asset search, buy/sell orders, director approvals, and reporting.
- Integrated relational and document databases with Redis-backed order workflows; deployed containerized services on Kubernetes and added blockchain voting support.

Slavujci - Spotify-Integrated Music Quiz Web App (team project) | Python, Django, Spotify Web API, JavaScript, Firebase/Firestore

- Implemented Spotify API functionality for a Top 5 music quiz, including cached app-token handling and retrieval of users' top artists, albums, and tracks.
- Contributed to quiz and game features in a collaborative web app that connects music discovery, playlists, and social play.

Rivian AutoVision Hackathon - Pothole Detection | Python, YOLO, Roboflow

- Contributed to a road-damage detection system through model training, backend development, and database integration; team placed second.

KVM Hypervisor | C, Linux, KVM

- Built an x86-64 hypervisor with configurable guest memory and paging, copy-on-write file operations, and interrupt-driven communication between virtual machines.

Multithreaded RISC-V Kernel | C++, Assembly, QEMU

- Implemented thread creation, preemptive scheduling, context switching, system calls, semaphores, memory allocation, and console I/O.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, SQL, Assembly

Backend & data: Flask, Django, REST APIs, JWT, MySQL, MongoDB, Redis, Firebase/Firestore

Tools & systems: Docker, Kubernetes, Git, Linux, KVM

English: Professional working proficiency
